## 1. Python-Docker

The screenshot shows the Docker Desktop interface. On the left, the 'Command Prompt - docker-c' window displays the following output:

```
=> => naming to docker.io/library/python-client:latest
0.0s
=> => unpacking to docker.io/library/python-client:latest
0.0s
=> [client] resolving provenance for metadata file
0.0s
[+] Running 5/5
✓ client           0.0s   Built
✓ server           0.0s   Built
✓ Network python_default 0.1s   Created
✓ Container python_socket_server 0.2s   Created
✓ Container python_socket_client 0.1s   Created
```

Below this, the logs for the 'python\_socket\_server' container are shown:

```
Attaching to python_socket_client, python_socket_server
python_socket_server | [SERVER] Listening on 0.0.0.0:12345...
python_socket_client | [CLIENT] Connected to server at server:12345
python_socket_server | [SERVER] Connected to client at ('172.18.0.3', 49248)
python_socket_client | [YOU] Enter message: hi
python_socket_server | [CLIENT] hi
python_socket_server | [YOU] Enter response: hello
python_socket_client | [SERVER] hello
```

On the right, a 'Command Prompt - docker a' window shows the following output:

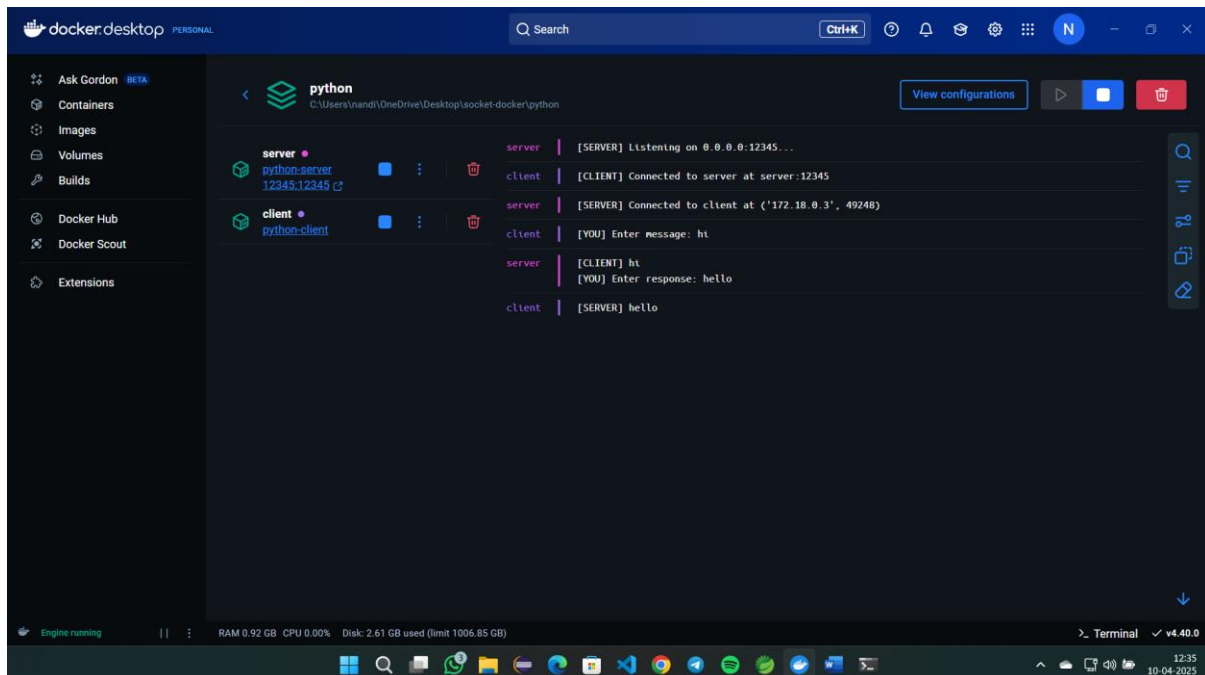

```
Microsoft Windows [Version 10.0.22631.5189]
(c) Microsoft Corporation. All rights reserved.

C:\Users\nandi>docker attach python_socket_server
[CLIENT] hi
[YOU] Enter response: hello
```

Below this, another 'Command Prompt - docker a' window shows the following output:

```
Microsoft Windows [Version 10.0.22631.5189]
(c) Microsoft Corporation. All rights reserved.

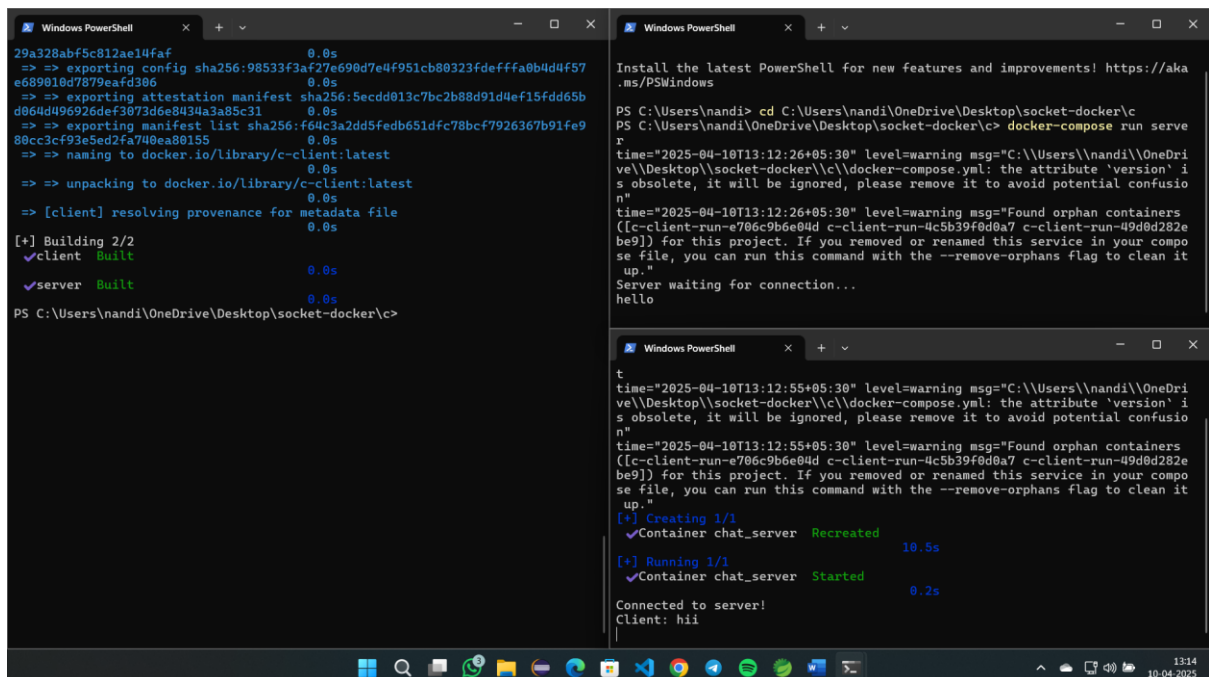

C:\Users\nandi>docker attach python_socket_client
hi
[SERVER] hello
[YOU] Enter message: |
```
